

OBJECT OF THE MONTH

ALPEN-ADRIA-GYMNASIUM

PICHLER has made a significant contribution to creating a pleasant, performance-enhancing and hygienic indoor climate at the Alpen-Adria-Gymnasium in Völkermarkt. As part of the project, a total of 65 LG 1000 SKDE classroom ceiling units were supplied for the classrooms.

The ceiling units ensure reliable, controlled ventilation of the classrooms, thereby supporting a healthy learning environment for pupils and staff. In schools in particular, a demand-controlled fresh air supply is crucial for sustainably improving concentration, well-being and air quality.

In addition, ventilation units from the Komfovent series were installed in other areas of the school building. These supply fresh air to learning zones, general cloakrooms, changing rooms, the gym and sanitary facilities, amongst other areas.

The combination of classroom ceiling units and central ventilation units has resulted in a modern, efficient ventilation solution tailored to the different areas of use.

DATA & FACTS

Location: Völkermarkt

Completion: 2026

Type of building: Educational institution

Builder: Carinthian Directorate of Education

Architect: Atelier Frühwirth ZT GmbH

Building technology: FISCHER & Co GmbH

Planner: SK Planung GmbH

Products: School ventilation units LG 1000 SKDE +
Ventilation units Komfovent series
