FLORASDORF, VIENNA

The development of the new Florasdorf district combines the old and new under the theme „city meets village“. The project „Florasdorf am Anger“ includes a diverse range of living spaces that offer the right housing for every family and life situation.

The staircases are an important component of the structures. These are equipped with a PICHLER pressure ventilation system that reliably ensures safety in the event of a fire. Each staircase has a „vestibule“ that provides the open staircases with light and air. This area is equipped with seating and connects the individual floors via atriums to form small „storey communities“. The aim was to find innovative solutions for „generational living“ in the field of social sustainability and further develop the SMART housing concept.

DATA & FACTS

Location: Vienna

Completion: 2018

Type of building: Residential Building

Architecture: Freimüller Söllinger Architektur ZT GmbH

Building technology: Ing. Hiessberger Gesellschaft m.b.H

Products: PICHLER pressure ventilation system

Product groups:

**FIRE
PROTECTION
SMOKE AND
HEAT
CONTROL**
