

# OBJECT OF THE MONTH

## HEADQUARTERS INSTITUTE ALLERGOSAN

The impressive new headquarters of the AllergoSan institute opened on November 24, 2017, precisely one year after the foundation stone was laid. The Styrian company makes its mark with this architectural work of art. Today, the Institut AllergoSan, as the Austrian centre of microbiome research, is inextricably linked to probiotic research and therapy.

It was important to the company to create a positive working environment for its employees: „Here, our employees have ample space for innovative thinking; we want to give them the space to develop,“ explains company founder Frauwallner. This was particularly important in the design of the offices.

A sophisticated acoustic concept ensures a quiet environment despite high levels of activity, and the rooms are ventilated and cooled in the summer evenly via ceiling elements – without drafts.

### DATA & FACTS

Location:	Graz, Styria
Completion:	November 2017
Type of building:	office building
Architecture:	Architektur 64 ZT GmbH
Building technology:	Reisenhofer Karl GmbH
Products:	centralized ventilation units, fans, sound absorbers, volume flow controller, valves, fittings, spiro, fire dampers, etc.
