

OBJECT OF THE MONTH

HIRSCH BRACELETS, KLAGENFURT

Hardly any other Carinthian company looks back on such a rich and long-standing history as HIRSCH Armbänder GmbH: Founded in 1765, the family-owned company has been a watch bracelet manufacturer of international standing for decades. But the watches keep ticking.

Ever since, the company has advanced and improved its core competencies with regard to the techniques and processes for material processing and material machining, primarily in the sector of watch bracelets.

When the company expanded its production site, implementing an energy-saving ventilation concept, it relied on three roof-integrated central ventilation units and a variety of components from the PICHLER range.
