HOSPITAL, OBERWART

On a floor area of 44,800 square meters with a built-up area of 16,000 square meters, the new hospital in Oberwart will be built as a new specialist hospital in southern Burgenland.

The building should be completed by 2023, and the new hospital should go into full operation in 2024 after a transition phase. The new range of services will include, for the first time, a heart catheter laboratory, the latest equipment in interventional radiology and seven operating rooms. Entry into robotic surgery is already in the existing building.

The new building of the hospital is part of the „Masterplan Burgenland Hospitals“, with which the Burgenland state government wants to secure the quality of hospital care in the state for the future and at the same time ensure efficiency in financing.

In addition to the ONE motor, various components from the PICHLER range were used for the energy-efficient fire protection concept. On behalf of PICHLER, the project is accompanied by the engineering office Markus Löcker, in the field of fire protection.

DATA & FACTS

Location: Burgenland

Completion: 2024

Type of building: Hospital

Architect: Ederer Haghirian Architekten ZT-GmbH

Planning: Ingenieurbüro Lang GmbH

Execution: DIPL.ING. ANTON HOFSTÄTTER GmbH

Products: fire dampers, ventilation grilles, sound absorbers, volume flow controllers, weather protection grilles
