MERKUR CAMPUS, GRAZ

The Merkur Campus is a new, modern office building in Graz that embodies the Merkur concept of precautionary thinking. The Merkur Campus comprises two towers, one with eight and one with five storeys, which complement the existing building of the regional directorate. The buildings are connected by a ground floor structure that includes exciting special functions.

The Merkur Campus is meant to combine and embody lifestyle and health. This applies to the offices, the catering area, the many green spaces and the new fitness studio.

The energy-saving ventilation concept is based on various components from the PICHLER product range, ensuring pleasant air and more comfort in the office spaces. The new headquarters is also equipped with a PICHLER pressure ventilation system, which ensures safety in the event of a fire thanks to a smoke-free escape and staircase.
