

ORBI TOWER, VIENNA

Vienna's new world of work was completed on time in June 2017 after a construction period of only 24 months. The ORBI Tower closes the last gap in the booming TownTown business city in the 3rd district.

In addition to its unique architecture and impressive height, the ORBI Tower and its forward-looking office space concept attracts a great deal of attention and interest from companies that want to stay at the forefront of the future.

Satisfied employees are more willing to work, more efficient and many times more productive. The ORBI Tower ensures an ideal work-life balance. The building has a „wellness climate“ that prevents drafts and loud noises and equipment that actively promotes efficient and results-oriented work in flexible teams. The energy-saving ventilation concept is based on various components from the **PICHLER** product range, ensuring pleasant air and more comfort in the office premises.
