

OBJECT OF THE MONTH

SUNNY ALLEY, CZECH REPUBLIC

The aim of the „Sunny Alley” project from BUBA VISION was to build family houses that are energy efficient in terms of operating costs and also user friendly in terms of the environment, control and management of technologies in the house. PICHLER PKOM⁴ units were involved in the houses by Evora CZ.

Each unit provides the houses with heat recovery ventilation, space heating and cooling together with domestic hot water. A central air humidifier allows for regulation of humidity in the houses to achieve the optimum level based on users needs. This option is particularly appreciated by allergy sufferers and all fresh air lovers.

The family houses are located on the very edge of the village of Chýně, with a convenient location both to the center of the capital city of Prague and to Václav Havel Airport. The drive to the Prague ring road, as well as to the Pilsen exit, is less than ten minutes by car from the houses, which allows a comfortable drive to both the center of Prague on the motorway network.

DATA & FACTS

Location: Czech Republic

Completion: 2020

Type of building: family houses

Architect: Ing. Petr Mareček

Building technology: Evora CZ, s.r.o.

Products: Heat pump combi units PKOM⁴

Product groups:
