

OBJECT OF THE MONTH

RECORDING STUDIO, TYROL

For professional audio recordings, excellent room acoustics and room temperature in the studio are essential. The ventilation system from PICHLER played a central element in the planning of the recording studio, because air that is too warm can be problematic for the equipment used in the studio. Many old tube devices as well as newer transistor devices require a constant room temperature in order to avoid fluctuations in sound quality.

The VERSO RHP 30 with PVSR volume flow controllers and individual room controller for 7 zones provides heating and cooling of the air. A special feature of the building is the space within space principle - the studio consists of two building shells that have no fixed connection to each other. Special air ducts with additional sound absorbers and the use of heavy-duty film ensure whisper-quiet operation of the ventilation system so that excellent acoustics are maintained in the studio.

DATA & FACTS

Location: Tyrol

Completion: 2023

Building technology: Haselsberger Installationen

Products: Ventilation unit Verso RHP 30
volume flow controllers round,
spiro pipes & fittings,
silencers

Product groups:
